

How strong is your security profile?

Businesses need security that just works, but managing different protection systems is rarely simple.

Our dedicated team of experts identified a gap - centralised, reliable management for mixed security stacks. Our solution? Building on your Microsoft Defender and Microsoft 365 tools, we can provide reliable, hands-on security from one dashboard, for your devices and cloud environment.

MDR Essentials

Our MDR Essentials service is built entirely around the Microsoft Defender suite. This provides a unified, powerful way to secure your devices and entire Microsoft 365 tenancy, delivered simply by our dedicated team.

Integrate with existing technologies, and consolidate your stack to simplify operations and reduce cost. Standardised global security policy management. Complete, real-time visibility of your attack surface. 24/7 protection across cloud, identities, and endpoints. AI-enhanced, human-led MDR.

Are your end-user devices always protected?

Every device is a potential entry point for threats. Aligning security with productivity requires a trade-off, but you need immediate visibility and detection to turn device investments into a source of strength, not vulnerability.

How many solutions are in your current security stack?

Relying on multiple, siloed solutions creates gaps and blind spots that amplify potential device vulnerabilities. Unifying and consolidating your core protection, creates a resilient and easily managed endpoint defense without the fragmentation risk.

Do you have complete transparency over your endpoints?

The greater the quantity of endpoints, the larger your attack surface. Legacy software, weak security, and poor patching create vulnerabilities.

What will a breach cost you?

The financial fallout of a cyber-breach is massive and felt deeply in the NZ market. Outdated devices can't handle modern threats, making a foundational investment in managed cyber security an essential insurance policy.

Strengthen Your Defences

MDR Essentials are your protection entry point, providing a strong foundation in cybersecurity posture management, asset visibility, and threat detection and response.

Whether you are just beginning your cybersecurity journey or need immediate coverage, MDR Essentials deliver the critical tools to protect your business with a clear path to scale.

Endpoint to Cloud Protection and Visibility

MDR Essentials

Cloud Endpoint

Security Posture Rating	Improve your security posture rating	●	●
Asset Inventory	Achieve complete asset visibility across your attack surface	●	●
Tenant Administrator	Easily manage multiple tenants with a unified view	●	
24/7 SOC with Active Response	Neutralise threats using Blackpoint's expert, human-led SOC (Security Operations Centre)	●	●
Cloud Identity Detection and Response	Protect your cloud identities 24/7 with native AI-enriched technology	●	
Blackpoint EDR Agent	Protect your devices 24/7 with patented, native AI-enriched technology		●
Windows Defender Management	Get centralised, global management for Defender		●
Essentials Cloud Security Integrations	Microsoft 365, Google Workspace, Cisco Duo, Azure SSO	●	
Essentials Endpoint Security Integrations	Microsoft Defender and Microsoft Endpoint Security Integration		●
