

Take control of your fleet with a smarter, more sustainable device strategy.

Local government teams have an ongoing need to modernise device fleets, reduce operational overheads, and meet sustainability objectives.

Fragmented hardware, rising replacement costs, and limited IT capacity can make it difficult to deliver consistent services to staff and rate payers.

Softsource vBridge, with The Laptop Company, provides a complete Modern Fleet Management solution that gives your organisation control, visibility and long-term costs efficiency across the every device's lifecycle. Additionally, through our Renew programme, we can extend the usable life of devices beyond their original warranty without reducing end-user experiences or uptime, to reduce both fleet costs and environmental impact.

A smarter approach to the device lifecycle

Standardise and simplify

Our Modern Fleet Management framework deploys enterprise-class HP devices matched to user needs to create a consistent, supportable fleet and user-experience.

Extend device lifecycles

Through the Renew remanufacturing and maintenance program, out-of-warranty devices are maintained to enterprise standards, enabling dependable redeployment within your fleet.

You can also redeploy and track assets within your workforce when upgrading teams or projects that need more powerful devices mid-cycle.

Reduce operational burden

Budgeting, procurement, device provisioning, redeployment, repairs, asset tracking and end-of-life processes are managed through TLC Modern Fleet Management services, lowering pressure on ICT teams, and allowing you to maximise your return on spend in the long term.

Recover more value from every device with RecoverMax

Get money back for end of use devices and ensure devices that are at end of life are sustainably recycled using New Zealand EPA-regulated providers.

Improve visibility and planning

Lifecycle reporting built into the Modern Fleet Management platform helps forecast renewals, manage budgets and plan long-term strategy with confidence.

Support sustainability goals

A circular model, delivered through Modern Fleet Management, reduces e-waste, lowers carbon impact and supports broader outcomes requirements.

Why councils choose Softsource with TLC + HP

- Local, secure and aligned to NZ public sector requirements
- Modern Fleet Management proven across the country's largest and most distributed workforces
- Enterprise standards across new, refurbished and remanufactured devices
- Lifecycle extension options to cut fleet costs and provide measurable sustainability outcomes
