External Penetration Testing

Rigorous. Manual. Real Hacking.

Many penetration tests begin with a scoped asset list, pre-shared credentials, and limited time. That is not how attackers operate, and it produces results that do not reflect your actual exposure.

METHODOLOGY

True Blackbox

No prior access, no internal documentation, no assumptions

ENGAGEMENT SCOPE

Outside-In

Starting only from your organisation's name

EXPERTISE

Critical CVEs Discovered

Across governments, financial institutions & global enterprises

| OUR APPROACH

How We Work

01

No Prior Access Required

Each engagement begins from zero. We conduct open-source recon, asset discovery, enumeration and exploitation without insider knowledge.

02

Manual Testing Throughout

Automated scanners have their place in recon, but they do not replace skilled human judgement. Every finding is the result of manual, hands-on testing.

03

Findings That Matter

We report vulnerabilities with genuine impact: auth bypasses, injection flaws, access control failures. Severity reflects actual exploitability, not theory.

04

Confirmed and Reproducible

Every vulnerability is manually verified. Each finding includes a demonstration of the issue and its impact. No speculation, no noise. Your team will not spend time triaging invalid findings.

What We Cover

SCOPE OF TESTING

- Internet-facing web applications and APIs
- External network infrastructure and exposed services
- Authentication and session management
- Access control and privilege boundaries
- Administrative interfaces and staging environments
- Third-party integrations and supply chain exposure
- Sensitive data disclosure across all attack surfaces

DELIVERABLES

Executive Summary

Business-impact narrative suitable for leadership and stakeholders

Technical Report

Detailed findings with full reproduction steps and evidence for each vulnerability

Remediation Guidance

Practical, prioritised recommendations specific to your environment

Retesting

Once remediation is complete, we verify that findings have been resolved properly
